

P

In addition to providing basic plumbing for most commercial and retail facilities, S. Carpenter Construction can meet the specialized plumbing requirements of industrial, manufacturing and medical facilities. We are experienced in municipal waste water treatment, water pump stations, industrial process piping and "wet heating" piping systems. In addition, we install gas piping, fire protection systems, and perform plumbing construction, including water piping systems for medical offices and hospitals.

Southington Water Pump Station put our specialized plumbing services to the test.

At Associated Spring, a process coding system was installed.
